LARGE FORMAT COLOR CONTROL.

Powered by Innovation.

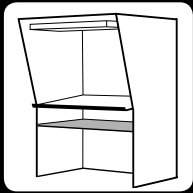

PROOFSTATION 30 40 LARGE FORMAT

The proofStations 30 and 40 are large-format solutions for color matching and quality assurance. They satisfy the toughest demands and, as entry-level models, they can be individually configured to suit your needs.

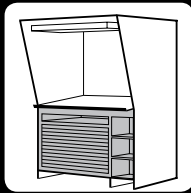

The proofStations are available in the standard version, as a soft proof solution and a multiLight version with four illuminants (D50, D65, TL84 and A). Various accessories are available for the proofStation 30 and 40 enabling you to configure each unit to meet your individual requirements.

The optional UV proof light makes the proofStation the perfect choice for applications in the packaging sector or for assessing prints and coatings containing brighteners. The color of the side and rear walls is Munsell N7 to permit neutral viewing. The JUST moduLight color proof lights make for glare- and reflection-free illumination and are unparalleled in terms of light quality and illuminance. The JUST daylight 5000 proGraphic fluorescent lamps are ISO-compliant and achieve top values for chromaticity error, color temperature and metamerism index.

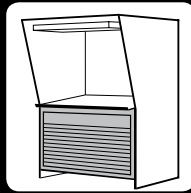

Possible Configurations

Can be expanded with up to 5 shelves

Storage cabinet with 15 drawers and side shelves

Filing cabinet with 8 drawers and lockable compartment

Adjustable storage shelves

The proofStations 30/40 can be used for ISO 3664 compliant illumination of sheet sizes 6B/7B. Large viewing area creates an easy to use work space.

The asymmetrical design of the JUST moduLight permits exact color control without annoying glare and reflections.

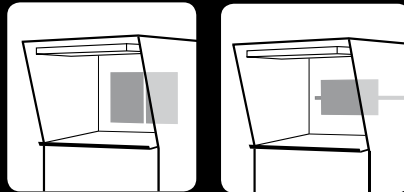

We are connected!

The soft proof stations from JUST Normlicht are supported by soft proof software from leading manufacturers. The SP version of the proofStations has the patented JUST USB interface for trouble-free communication with many monitor calibration software packages.

proofStation 30/40 Large Format soft proof version

The proofStations 30 and 40 with SPcontrol offer a convenient solution for color assessment for soft proof applications. The SPcontrol features precise brightness control of the fluorescent lamps to match the luminance of the soft proof monitor. This creates accurate, controllable, software-based viewing conditions for the soft proof process.

Soft proof monitor versions

When equipped with the appropriate monitor mount, the proofStation can be fitted with one or two monitors in either landscape or portrait orientation. The monitor can be moved forwards for easier operation and calibration. On the "Scroll Version", the monitor can be moved to the left and right on a rail, to enable automatic display of the printed sheet zone by zone.

The **SPcontrol** feature allows the viewing light to be dimmed to the exact luminance of the monitor. Two settings can be saved for preferred viewing situations.

proofStation 30 and 40 Large Format with SPcontrol, storage cabinet and sideshelves

The monitors shown are not included.

200100	Monitor mount for 1 or 2 monitors	
200101	Monitor mount for sliding monitor	

WALL ILLUMINATOR

The Wall Illuminator starts where other viewing booths usually stop. Thanks to its size and accessibility, it is optimally designed for assessing the color of large-format prints. Whether for exhibition banners or advertising posters – standard-compliant illumination is guaranteed over the entire rear wall.

The Wall Illuminator is optionally available with a magnetic rear wall in neutral gray (Munsell N7) or as a backlit version for examining substrates against the light. Both versions ensure glare- and reflection-free illumination thanks to the use of JUST moduLights.

Wall Illuminator with magnetic rear wall

The completely magnetic rear wall permits straightforward fastening and viewing of large-format prints. The asymmetrical light guarantees glare- and reflection-free illumination. Also available in a soft proof version with SPcontrol.

The **SPcontrol** feature enables exact dimming of the viewing light. The integrated hour meter indicates when it is time to replace the tubes.

Wall Illuminator with backlight

The backlight of the Wall Illuminator makes it possible to examine the full area of backlit substrates, such as textiles or transparent prints, against the light. The brightness of the JUST moduLight and the backlight can be dimmed separately.

VIRTUAL PROOFSTATION SIDE-BY-SIDE

BASIC XT

The Virtual proofStation Side-by-Side is the proofing station for the pressroom that grows with your demands. The extension station can be used to extend the length of the basic station as needed, which enables parallel color matching of multiple printed sheets.

Basic station includes a mount for accommodating one or two monitors, a sliding keyboard shelf and a vented storage cabinet. The SPcontrol of the basic station also controls the dimming of the light of the extension stations. The rear and side walls are neutral gray for optimum color matching.

The **SPcontrol** feature coordinates the brightness of the JUST moduLight and the monitors to an exact luminance match.

The modular principle

Just as the Virtual proofStation Side-by-Side can be expanded as needed, the monitor equipment can likewise be tailored to your individual requirements. The monitor mount XT can accommodate an additional two monitors.
