DO I NEED A DIGITAL ASSET MANAGEMENT SYSTEM?

Use this checklist to determine if your organization needs a DAM system to manage your valuable collection of images, documents, audio and video files. Simply tick each checkbox below that applies to your organization.

	Assets are everywhere: on a server or individual computers, CDs/DVDs, hard drives, etc.		Perform time-consuming and repetitive tasks such as resizing, renaming and converting files
	Currently using an unstructured folder hierarchy and an inconsistent file naming convention		Waste time saving files in other formats for the off-chance someone will need one, resulting in duplicate assets
	Wasting valuable resource time looking for assets		
	Assets are in a variety of formats, and without the right software, they're difficult to preview	Ш	Colleagues can't find assets by themselves and you've become the "go-to" person for locating assets
	Work is often recreated because it's easier than finding old files		Email size restrictions limit the ability to share digital assets throughout the organization
	Often re-purchase assets your organization already owns because you cannot locate them		Sharing large files with colleagues involves a multi- step process that takes time and effort
	Large video files take too long to preview and require of additional codec software		Field personnel need easy access to digital files such as images, video and other documents
	to view		Difficulty sharing assets between computing
	Unapproved or incorrect files are being used by		platforms and devices
	internal teams or partners		Website and marketing collateral materials don't have a consistent image and branding
	There are multiple "final" versions and no one knows where the latest version is stored		Need to easily protect your work with watermarks
	Work with creative and production applications and would like to repurpose content from one		Don't have a secure location where files are stored and shared with others
	system to the other		Need to protect large image collections and other file
	Would like to repurpose content to maximize creative investment		types as permanent historical records

Do you need a digital asset management system?

o - 4 points Possibly.

You have simple needs and a process in place. However, you might want to reevaluate if the problems you've identified in the checklist are having a negative impact in your organization. Perhaps you already have a central location to store files, but would benefit from easily distributing your digital assets to others. A DAM system could help you optimize your workflow.

Yes!

Your organization is having considerable problems that are affecting overall efficiency and productivity. A DAM system will help you organize and archive your digital content such as images, documents, creative files, audio and video clips. It will also provide your organization with a mechanism for easily finding and sharing those assets with others.

10 OR MORE POINTS Definitely!!!

Digital asset management is a must in your organization. By implementing a DAM system, your organization will see dramatic time savings, efficiency gains and streamlined workflows.

Feeling overwhelmed? Don't worry, we have a <u>Complete Toolkit</u> that walks you through the entire process.
